Personal Portfolio Website Project

Project Description:

Create a personal portfolio website to showcase your skills, projects, and experiences. This website will serve as a professional online presence and a showcase of your work to potential employers or collaborators.

Requirements:

1. **Homepage:**
   o Display a welcome message and a brief introduction about yourself.
   o Include a navigation bar to easily navigate to different sections of the portfolio.
2. **About Me:**
   o Create a section that provides more details about yourself, including your background, education, and interests.
   o Include a professional photo of yourself.
3. **Skills:**
   o List your technical and soft skills.
   o Optionally, use icons or visual elements to enhance the presentation.
4. **Projects:**
   o Showcase a few key projects you have worked on.
   o For each project, include a project title, description, technologies used, and a link to the project (if applicable).
5. **Resume:**
   o Provide a link to download your resume/CV in PDF format.
6. **Contact:**
   o Include a contact form or provide email/social media links for visitors to get in touch with you.
   o Consider adding a downloadable vCard for easy contact saving.

Technical Requirements:

1. **HTML:**
   o Use HTML to structure the content of your website.
2. **CSS:**
   o Apply CSS for styling and layout. Ensure the design is responsive and visually appealing.
3. **JavaScript:**
   o Implement interactive elements using JavaScript (e.g., show/hide sections, form validation).
   o Optionally, consider using a JavaScript framework/library for enhanced interactivity.

Additional Tips:

- **Responsive Design:** Ensure your website is responsive, meaning it looks good and functions well on both desktop and mobile devices.
- **Clean Code:** Write clean and well-organized code. Use semantic HTML for better accessibility.
- **Visual Design:** Pay attention to the overall design aesthetics. Use a consistent color scheme, typography, and layout.
- **Portfolio Content:** Showcase your best work and provide detailed information about your skills and experiences.
- **Git Repository:** Consider hosting your project on a platform like GitHub. This allows you to demonstrate version control skills and makes it easy for potential employers to view your code.

Submission:

Submit the link to your website if hosted or GitHub repository link, the code for different pages.
